

Second Brain Starter — Quick Start (15 minutes)

1) Create your repo

- Create a private GitHub repo named “second-brain” and clone it locally.

2) Copy the starter structure

- Copy the templates/ folder into your repo root.

3) Install scripts

- Copy scripts/ into your repo root.

4) Daily flow (recommended)

- Capture during the day (templates)
- Synthesize at end of day
- Write handoff for tomorrow

5) Automation (optional)

- new_capture.py (create capture files)
- new_daily.py (create daily + handoff stubs)
- commit_push.sh (commit + push)

6) Suggested cadence

- Morning: review yesterday's handoff
- End of day: daily synthesis + handoff
